THE FUTURE CONNECTED

Solutions that Mean Business

Integrate **Communication** into **Business Strategy**

Clearspan®

Enhance Productivity

- » Drive business forward with powerful business tools
- » Work Anywhere on Any Device
- » Deliver real-time integration with enterprise applications

Create Business Continuity

- » Keep business moving forward no matter the obstacle
- » Make every phone on the planet a part of your network
- » Overcome the widest range of catastrophe scenarios with built-in reliability, scalability and performance

Protect Investments

- » Future-proof your investment with state-of-the-art design, scalability and open industry standards
- » Use existing phones and systems as long as they provide value
- » Exceed the expected ROI from a Unified Communications deployment

Lower Communications Costs

- » Support more users, with more functionality, on fewer servers
- » Accelerate adoption via easy to learn and use features
- » Maximize scarce resources with streamlined management processes
- » Grow confidently with simple, straightforward licensing
- » Migrate to IP telephony at the pace best suited for your enterprise

Connect to the Future

- » Deliver immediate productivity without immediate replacement
- » Adapt easily and quickly to new technology, new applications and new business opportunities
- » Create opportunities for competitive advantage

THE FUTURE . . .

A Proven Global Communications System

Clearspan provides a complete suite of communications capabilities from classic PBX functionality to a rich set of enhanced services and powerful integration to enterprise applications.

All Clearspan capabilities are delivered by a proven unified application providing classic telephony features and:

- » Business Conferencing
- » Unified Messaging
- » Call Center
- » Fixed-Mobile Convergence

Everything is built-in, not bolted-on, for maximum productivity, usability and flexibility and is in use by millions of users worldwide.

Clearspan Anywhere™

Clearspan delivers all features to any telephone inside or outside your enterprise. Users work at home, on their cell, at a branch office, or from any remote location with the same capabilities as if they were at their desk and can seamlessly move live conversations from device to device with no interruption.

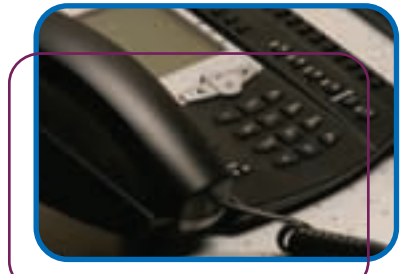

Integration with Enterprise Applications

Clearspan extends its powerful capabilities directly into business processes by offering a rich set of open interfaces that enable real-time integration with many enterprise applications. Clearspan provides standard integration to:

- » Microsoft® Office Communications Server 2007™
- » Microsoft® Live Communications Server 2005™
- » Salesforce.com®

State-of-the-Art Design

Clearspan is architected as an open, standards-based, communications system with a single applications environment enabling large enterprises to deploy global communications services using the same data center best practices used for data and application services.

SIP to the Core

Clearspan uses the industry standard SIP protocol at its core. Combined with industry standards and best-in-breed components Clearspan will evolve and adapt easily, quickly and with minimal disruption as new technologies and applications are developed.

Self-Paced Migration™

The benefits of the Clearspan solution do not depend on a complete conversion to IP telephony. Existing telephones behind PBX's and KeySystems can be integrated with all Clearspan capabilities. Conversion of legacy TDM phones to Clearspan SIP devices can then take place at the pace that best serves the enterprise, even down to the granularity of a single phone at a time.

Simplified Licensing

Clearspan offers a dramatically simplified licensing model based on users rather than devices. A single user license provides all standard Clearspan features on as many as 32 different devices. A few advanced capabilities, like Unified Messaging and Call Center, require additional licenses.

It's not about the technology... it's about the results.

Aastra is a specialist in large enterprise communications with over 29 years of experience. Our unique perspective gives us the ability to design a Clearspan system meeting your unique needs, deployed on time and professionally supported so that the benefits flow to your bottom line.

About Aastra

Aastra is a leader in IP communications products including unified communication solutions, IP-PBX systems, standards-based telephones, and contact center applications. Our enterprise network solutions address the needs of large customers who require reliability, scalability, productivity and enterprise-wide integration. Aastra is a trusted specialist in enterprise communications, with over 30 years expertise delivering PBX and contact center solutions to some of the largest and most demanding organizations in the world.
