

Clearspan Communicator

Product Overview

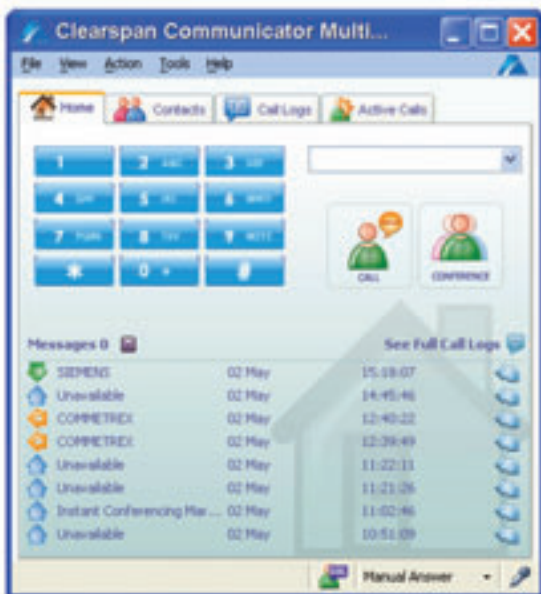

Clearspan Communicator is an integrated desktop application providing a fully SIP compliant audio and video softphone for Windows 2000, XP, and Vista. Communicator users can utilize the client as a primary or secondary phone device for their IP communications services.

Tight integration with the platform allows Communicator access to Clearspan's many advanced Voice over IP features such as video services, complete call control, and messaging/voicemail integration. It also allows the enterprise to provide all users automatic updates and version management through the Clearspan Application Server.

Clearspan Communicator consists of two modules:

- » The Audio-only client provides a desktop interface to make and receive calls as well as execute enhanced features such as notification, 3-way audio conferencing, voicemail, message waiting indicator, and contact features.
- » The Multimedia client provides All the capabilities of the audio-only client plus high quality multimedia transmission. Provides point-to-point video calling, audio conferencing for up to 15 lines, and ability to utilize the Clearspan portfolio of video services.

Video Call

Clearspan Communicator provides users with convenient desktop access and management of their telephone and expands traditional capabilities with multi-media telephony including point-to-point video calling and audio conferencing for multiple lines.

The Clearspan solution embodies the true meaning of Unified Communications, combining all end-user communication tools into a single, integrated, enterprise-wide infrastructure accessible from any device for dramatically increased productivity.

Add Communicator to the network through a simple software license file with no costly hardware upgrades. All Clearspan applications run on the same platform, use a common interface, and can be added to the network at anytime. Easily deployed and managed, it provides immediate impact.
